

## The Dynamic Payables Advantage

Every day companies struggle with managing the manual and time-consuming tasks of invoice processing. Not only is this process error-prone and inefficient, it can be very difficult to monitor. You can eliminate this manual process and make your organization more efficient and more productive, as well as gain accountability and visibility with Dynamic Payables.

### Accounts Payable Automation on Microsoft SharePoint®

**Scalable application saves time and money through increased visibility.**

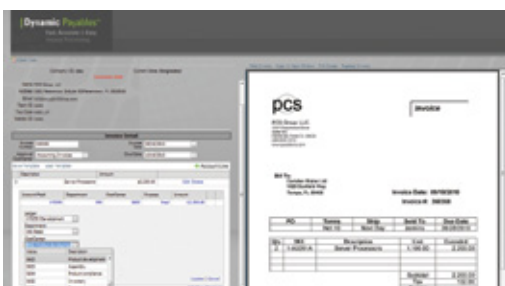

Dynamic Payables delivers a powerful, web-based invoice automation solution on the industry leading Microsoft SharePoint platform. Visual workflows optimize the payables process from receipt through invoice payment resulting in reduced cycle time and lowered processing costs.

### Direct Communication with Microsoft Dynamics SL

The Dynamic Payables Microsoft Dynamics SL Connector is an application-to-application communication layer which allows for the real-time exchange of data between the two systems. Dynamic Payables integrates with SL through .NET web services and a SQL data provider layer to provide a true integration point. The connector enables data exchange of critical accounting data allowing for:

- Real-time retrieval of vendor, chart of account, and PO information
- Direct batch and transaction creation within Microsoft Dynamics SL
- Final payment status confirmation from Microsoft Dynamics SL

## DIRECT SL INTEGRATION

Real-time search and verification of accounting vendor information.

## Enforce Accountability and Compliance

Dynamic Payables allows organizations to design workflows and manage information in order to enforce accountability and compliance by:

- Indicating who, where, and when approval tasks are due
- Enforcing data integrity with real-time ERP integration
- Standardizing and enforcing important business processes
- Validating user input with electronic forms
- Managing access to protect data security and privacy

REDUCE PROCESSING  
TIME AND COST BY

**40% - 60%**

## Improved Efficiency through Automation & Visibility

Dynamic Payables substantially reduces invoice processing time and costs by 40% to 60% utilizing OCR, automated transfer to SharePoint, rules-based routing, and automated GL coding. In addition, Dynamic Payables offers real-time visibility into payables transaction details.

## Automated features increase efficiencies and decrease costs through:

- Reduced data entry
- Intelligent approval routing
- Automatic and secure document storage
- Account coding templates
- Real-time process status and visibility
- In-progress accrual reporting
- Direct document access from Microsoft Dynamics SL
- Accessibility and visibility for auditing

## Flexible Maintenance and Refinement

Today's business environment is more dynamic than ever with process rules that are ever-changing—Dynamic Payables adapts to these changes. The flexibility of the SharePoint platform along with the intuitive graphical workflow designer within Dynamic Payables makes it easy for both business and technical personnel to quickly extend the solution's capabilities.
